## PREFACE.

---

I HAVE constantly used this Atlas in reading ancient authors, and with the assistance of Mr. Hughes I have made alterations in it. The last alterations have been made recently (1873). These alterations consist in the addition of some names, the erasure of a few names, and the removal of other names to different places. The amount of alteration is not great, and it may only be discovered by those who compare this edition of the Atlas with former editions. But though the alterations are few, the labour of making them has not been small. The labour of a whole day on some difficult position may result in leaving the position unchanged, or in adding to it a ? to indicate that the position is doubtful, or finally in simply erasing the name of the place.

In Map 13 a small plan of the country round Dyrrhachium has been inserted in the N.E. angle of the map for the purpose of explaining Caesar's blockade of Dyrrhachium (B. C. iii.) ; and both in this plan and in the map Petra is fixed in the true position as Goeler has determined it. If Petra is fixed, where it formerly was in this Atlas, and probably is fixed in other Atlases, the story of the blockade of Dyrrhachium is unintelligible.

I have made only one alteration in the plan of Rome, and in making it I have followed Dr. Dyer, who, I think, has put the Temple of Jupiter Capitolinus in the right place. A plan of Rome on a small scale is sufficient for such an Atlas as this, if it shows the principal positions which are established with certainty or with great probability. Those who would study minutely the topography of Rome, or of Athens, must take the trouble of consulting the books on these subjects.

In the plan of Athens I have erased the name of Enneacrunos on the Ilissus. It is certain that Enneacrunos was within the city (Dyer's Athens, Appendix), and it is also certain that it was near the Acropolis ; but I think that we cannot say more. I have allowed the name Callirrhoe on the Ilissus to remain, but I am not sure if it is in the right

place. If it is, I do not see how Cynosarges can be placed right in the plan.

I have not altered the position of Phalerum according to the views of the German scholars or some of them, and of the latest writer, as far as I know, on the topography of Athens, my learned friend Dr. Dyer. The position of Phalerum is a question of some difficulty still. Ulrichs first determined the true position of this place, as he supposed; and I believe that most scholars have assented to his conclusion.

Leake supposes Phalerum to be the modern Port Phanari, the most eastern of the ports in the Piraic peninsula. Ulrichs and others place Phalerum on the opposite or eastern side of the Bay of Phalerum, near the church of St. George and at a place named the Three Towers. There are remains of an ancient harbour at the Three Towers and of an ancient town; and also "the foundations of a mole of solid Hellenic masonry." There is no natural harbour at the Three Towers. The harbour, such as it was, appears to have been artificial, and probably therefore not very ancient. Dr. Dyer states (p. 115) that he is informed by Dr. Finlay, a resident of Athens, "that the Albanian peasantry called the spot Phalerea before Ulrichs' opinion was broached." It is difficult to say what is the value of this evidence.

About B.C. 457 the Athenians began to build "the Long Walls to the sea, both the wall to Phalerum and the wall to Piraeus" (Thucyd. i. 107). The Piraeus had been already fortified under the advice of Themistocles (Thucyd. i. 93), who recommended the Athenians to secure the Piraeus because it contained "three natural (self-made) harbours." It seems most reasonable to suppose that these three natural ports were the port named Piraeus proper, now Drako, and the two ports contained in the Piraic peninsula, now named respectively Stratiotiki and Phanari. If Phanari represents the site of Phalerum, Stratiotiki may represent Munychia. Two long walls then built parallel or nearly parallel to one another would connect the city with the port of Piraeus on the one side, and with Port Phalerum on the other, and the system of fortification would be rational and intelligible. But if Phalerum was at the Three Towers, and the Phaleric Wall joined the city to this harbour, the system of fortification was absurd and unintelligible. We are not informed that this supposed Phalerum was fortified, but it must have been fortified, if it was the true Phalerum. Whether it was fortified or not, it would be open to attack, for it was 35 stadia from the city, and the whole length of the coast of the Phaleric bay from Port Phanari to the Three Towers, near Colias in this Atlas, was exposed to the enemy. If the fortifications of the Piraeus protected that port (Drako) and extended across the

peninsula to the eastern extremity of Port Phanari, which I suppose to be Phalerum, the three natural harbours would be protected by the fortifications of the ports, and would be safely connected with the city by the wall to Piræus and the wall to Phalerum. If the Phalerum was at the Three Towers, why did the Athenians wish to secure this place, which was not a natural harbour, nor an artificial harbour either at that time, so far as we know? It was useless to them, when they had the command of three natural ports near to one another on the Piræic peninsula.

Thucydides (ii. 13) states that at the commencement of the Peloponnesian War, the circuit of the City wall, which was watched, was 43 stadia, and the part of the city wall, which lay between the points where the Long Wall and the Phaleric Wall respectively joined the City wall, was not watched; but he does not say how much this part was. This unwatched part of the wall would be considerable, if the Phaleric Wall ran direct to the wall of the city; and yet this part was not guarded, as we are told. Dr. Dyer (Athens, p. 110) conjectures that the part of the city wall between the Long Wall to the Piræus and the wall to Phalerum may have been about seven stadia; which conjecture he founds on the probable assumption of the Phaleric Wall, which he supposes to have begun at or near the Three Towers, having joined the city wall near the Itonian Gate, "since Pausanias arrives there in walking from Phalerum to Athens."

Thucydides informs us indirectly that there were three Long Walls. In the First Book (i. 107) he speaks of two walls, which he names the Long Walls, a wall to Phalerum and a wall to Piræus. In the Second Book (ii. 13) he speaks of the wall to Phalerum 35 stadia long, and of the Long Walls to the Piræus 40 stadia long, as existing at the beginning of the Peloponnesian War; and he adds, "of these walls the outer was watched." Thucydides has said nothing about the construction of this second wall to the Piræus, but in a passage of Plato (Gorgias, 456) Socrates says that he heard Pericles recommend the building of this second or intermediate wall as he names it. This new wall is also spoken of by other writers, and it is sometimes named the Southern Wall, as the original wall to the Piræus was named the Northern Wall. Thucydides then, who wrote after the close of the Peloponnesian War, gives the name of Long Walls to the Phaleric Wall and to the Piræic Wall (i. 107); but when he speaks of the walls to the Piræus, the Northern and the Southern Wall, as we must suppose, he names them the Long Walls to the Piræus, and they were of the same length, 40 stadia each. When (ii. 13) he uses the expression Long Wall (*τὸ μακρὸν τεῖχος*), he appears

to mean both the Northern and the Southern Wall to the Piræus ; and it is a probable conclusion that these two Long Walls to the Piræus were the walls named the Northern and the Southern Wall, and that they were very near to one another.

In the recent plans of the Athenian ports adapted to the beginning of the Peloponnesian War there are represented two parallel long walls, named the Northern Long Wall and the Southern Long Wall. The Northern begins at the fortifications of the Piræus and runs in a straight line to the city. The Southern begins near the fortifications which protected Port Phanari, and makes a bend till it takes a direction parallel to that of the Northern Wall. The Phaleric Wall is represented as running from the Three Towers to the city wall.

It is not easy to see why this Southern Wall was built if Phanari represents Port Phalerum ; for in that case the Phaleric Wall, which ran from Phalerum to the city, would seem to be near enough to the Northern Wall for all useful purposes. The construction of this Southern Wall seems to me the strongest evidence that we have in support of the opinion of Phalerum being at the Three Towers. It may be supposed that it was discovered that the Phaleric Wall was useless as a defence, and that the Southern Wall was therefore necessary. If this is so, the Athenians made a great blunder in connecting the position of the Three Towers by a wall with the city. If Phalerum was at Phanari, it is still possible that some reason was discovered for building this Southern Wall very near and parallel to the Northern Wall.

After the battle of Aegospotami the Long Walls of Athens were demolished by the Lacedæmonians, and if we accept the evidence, they were entirely demolished (Xenophon, *Hellen.* ii. 3. 11). There is no ground for assuming that the demolition of the walls was not complete, so complete at least as to make them useless. It is said by Xenophon and by Lysias (*Contra Agoratum*, p. 451, &c.) that the original proposal of the Lacedæmonians was that ten stadia of each of the Long Walls should be taken down, which may be used as evidence that it was proposed to destroy only two Long Walls. If the two Long Walls<sup>1</sup> were those named the Northern and the Southern, we might then suppose that the Phaleric Wall, if Phalerum was situated at the Three Towers, was not demolished ; and as it was perfectly useless, there was no reason for demolishing it. However, finally "the Long Walls and the Piræus were demolished" (Xenophon, *Hellen.* ii. 2, 20, 23) ; and if Phalerum was at Port Phanari,

<sup>1</sup> It is said (*Contra Agoratum*, c. 2) "ten stadia of each of the Long Walls ;" but in c. 4 it is said "instead of taking down ten stadia of the Long Walls, it was determined to demolish the Long Walls completely, and to take down the wall round the Piræus."

the Phaleric Wall was also demolished; for Lysias states that the final determination was to demolish the Long Walls and the wall round the Piræus, which line of fortification, as I assume, included Port Phanari, whether it was the site of Phalerum or not.

The destruction of the Long Walls would be a work of some labour, but it was done probably, where the ground would allow it, by undermining the walls; and the expressions of Xenophon (*κατέσκαπτον*), and of Lysias (*κατασκαφεῖν*, and *ὅλα τὰ μακρὰ τεῖχη διασκάψαι*), may refer to the mode of demolition.

After the battle of Cnidus (B.C. 393) Conon undertook the restoration of the Long Walls and the wall round the Piræus (Xenophon, *Hellenica*, iv. 9. 10). If Conon restored the Long Walls as they originally were, there would be three Long Walls after B.C. 393; but as two Long Walls might serve all the purposes of three, if they were put in the right place, we suppose that Conon's Long Walls were only two, and that all remains of Long Walls which now exist are remains of Conon's walls, and are no evidence of the Long Walls which existed at the beginning of the Peloponnesian War. No traces of three walls, it is said, have ever been discovered between Athens and Piræus, which, I suppose, is intended as an argument that Phalerum was not at Port Phanari. But if Phalerum was at Port Phanari, we cannot expect to find any traces of three walls. The old walls were demolished, and the existing remains of Long Walls are the walls of Conon, which may not have been built exactly on the line of the original walls. An inscription, which relates to the repairs of the Long Walls, "apparently about B.C. 335, mentions only two, the North Wall and the South" (Dr. Dyer, p. 114). But as the original walls had been demolished, this inscription refers to the restored walls of Conon. Harpocration, who quotes Antiphon's speech against Nicocles, says that there were three walls in Attica, by which we must suppose that he means three Long Walls between Athens and the sea: he also quotes Aristophanes in the play named *Triphales* as authority for a Northern Wall, a Southern Wall, and a Phaleric Wall, and he adds that the wall between the Northern and the Phaleric was named the Southern, which Plato also speaks of in the *Gorgias*. If we can trust Harpocration then, we have evidence of three walls existing during the Peloponnesian War, for Antiphon died before the old walls were demolished; and if Aristophanes lived to about B.C. 380, as it is supposed, he may have written the *Triphales* before the end of the Peloponnesian War; and this is a probable conclusion.

It is said (Dictionary of Geography, edited by Dr. Smith, article Athens, p. 305) that "Ulrichs discovered on the road from Athens to

St. George considerable substructions of an ancient wall, apparently the Phaleric Wall." Dr. Dyer (*Ancient Athens*, p. 115) says that "a gentleman observed in company with the learned professor (Ulrichs) distinct vestiges of an ancient wall in the direction between Athens and Agios Georgios (St. George). And Curtius says that at its termination large square blocks of stone project into the sea, for the purpose of protecting a landing-place." Dr. Dyer adds in a note: "Dr. Ulrichs does not speak very confidently. He says, 'I think I recognized at many points in the vineyards, elevated some feet above the marshy hollow, on the right-hand side of the road from Athens, indisputable remains of the old Phaleric Wall' (Pamph. p. 9). Dr. Curtius says more positively that there are remains in two places, consisting of courses of stone resting on rubble. *Erläuternd. Text.* p. 34."

Ulrichs' evidence about this wall is vague, and it must be amended before we allow much weight to it. The evidence of Curtius is that "there are remains in two places." I hope that he will inform us, if he has not already done so, what are the length, breadth, and other particulars of these remains; whether they lie in the same line or direction, and are evidently parts of the same wall; and I also hope that he has drawings of these remains. It is sufficiently proved that there was a town at the Three Towers and an artificial harbour. If this was the site of Phalerum, it must have been fortified, as I have said; and if the place was worth this labour, there ought to have been two long walls to Phalerum to secure the communication with the city, as there were two Long Walls to Piræus at the beginning of the Peloponnesian War. For Phalerum, if it was situated at the Three Towers, was so far removed from the Piræic fortifications that it was a separate and independent place and required its own fortifications and Long Walls.

More might be said on this subject; but this is enough for this place. It may at some future time be proved that Phalerum was at the Three Towers, but at present we may prudently suspend our judgment. All that I have said about the absurdity of connecting the place at the Three Towers with the city by a long wall, will still remain true.

GEORGE LONG.

# INDEX.

The abbreviation F. is used for Fluvius—I. or Ins. for Insula—M. for Mons—P. for Portus—Pr. or Prom. for Promontorium—S. or Sin. for Sinus.

Names of Countries, Districts, &c., are distinguished by Capitals—Names of Tribes or People by an Asterisk prefixed. The Modern Names are in Italics. The note of interrogation attached to a name signifies that the site is uncertain.

The latitudes are in all cases North, unless otherwise distinguished; the longitudes, East of the meridian of Greenwich, excepting where the letter W. (West) is attached. In the case of Rivers, the latitude and longitude given is that of the place where the name happens to be written on the Map.
